1. Introduction & App Philosophy

IPO Money Handler is a privacy-first, manual financial ledger and IPO application manager designed specifically for Indian retail investors, HNIs, and family portfolio managers.

100% Offline & Private

All bank account balances, allocations, applications, and PINs are stored purely on your phone's local storage. Zero server uploads.

Accurate Funds Blocking

Tracks ASBA / UPI mandate blocked amounts across bank accounts without distorting your actual total net worth.

Full Allotment Lifecycle

Seamlessly handles Allotted stocks (converts to Invested Portfolio) and Unblocked refunds (restores Available cash).

2. Fundamental Money Formula

In regular finance apps, when you apply for an IPO, the money appears deducted or vanishes from sight. In IPO Money Handler, your funds are accurately partitioned:

```
TOTAL MONEY = AVAILABLE MONEY + BLOCKED MONEY (IPOs) + INVESTED MONEY
```

Category	Color Code	What It Represents	Impact on Balance
Available Money	GREEN (#059669)	Free liquid cash across all bank accounts, demat wallets, and cash reserves that you can spend or use for new applications.	Total Bank Balance minus Blocked Amounts.
Blocked Money	AMBER (#D97706)	Funds placed under ASBA / UPI mandate holds for active IPO applications awaiting allotment results.	Held temporarily in your bank until allotment date.
Invested Money	INDIGO (#4F46E5)	Allotted IPO shares and manual stock holdings tracked in your portfolio at current market valuation.	Added to Net Worth; does not reduce total wealth.

Top Status Bar Quick Summary

The top bar always shows your **Total Net Worth**, **Available Cash**, **IPO Blocked Funds**, and **Invested Holdings** in real-time. Tapping on any category pill opens the respective detailed view.

3. Managing Accounts (Bank, Demat, Cash)

The **Accounts** tab (second icon on bottom bar) provides a 360-degree view of all your physical and virtual financial accounts.

Account Types Supported:

- **Bank Accounts** (HDFC, SBI, ICICI, Axis, Kotak, PNB, BOB, Canara, etc.): Automatically detects bank logos and tracks total balance vs. ASBA blocked amounts.
- **Demat / Broker Accounts** (Groww, Zerodha Kite, Dhan, Angel One, Upstox, etc.): Tracks trading balance and links to IPO applications.
- **Cash / Wallets** (Physical cash, Paytm, etc.): For liquid offline funds.

How to Add a New Account:

1. Tap the green + button on the top right or click **Add Account** in the Accounts tab.
2. Enter the **Account Name** (e.g. *HDFC Salary Account* or *Zerodha Kite*).
3. Select the **Account Type** (Bank, Demat, or Cash).
4. Enter the **Initial Balance (₹)** and optional notes.
5. Tap **Create Account**. The app automatically recognizes the logo and initializes the ledger.

4. Transactions & Quick Money Actions

The app allows you to record deposits, withdrawals, and transfers with zero latency:

➕ Add Money
Record salary credits, dividends, profit transfers, or external deposits. Increases account balance and available money.

➖ Deduct Money
Record expenses, bills, or cash withdrawals. Deducts directly from available liquid balance.

⇄ Transfer Money
Transfer funds between accounts (e.g. Bank to Demat trading account). Total net worth stays balanced.

Smart Virtual Allocations:

Inside each Bank Account detail page, you can divide your total balance into virtual allocations (e.g., *₹50,000 for IPOs*, *₹30,000 Emergency Fund*, *₹20,000 General*). This helps you budget without opening multiple real bank accounts.

5. IPO Explorer & Allotment Management

The **IPOs** tab is the powerhouse of the app. It provides live tracking of Mainboard & SME IPOs, automatic application calculation, and funds blocking.

A. Browsing Live IPOs:

- **Issue Size & Dates**: View opening date, closing date, price band (e.g. ₹475 - ₹500), lot size (e.g. 30 shares), and minimum investment.
- **Live Status Tags**: See at a glance whether an IPO is OPEN, UPCOMING, or CLOSED.

B. Step-by-Step: Applying for an IPO

Step 1: Tap on the desired IPO card from the **Live IPOs** list, then tap **Apply for IPO**.
Step 2: Select the **Bank Account** from which your UPI / ASBA mandate is blocked.
Step 3: (Optional) Select the destination **Demat Account** (e.g. Groww or Zerodha).
Step 4: Enter the **Lots Applied** (e.g. 1 lot, 2 lots, etc.). The app automatically calculates the total blocked amount (`Lots × Lot Size × Cut-off Price`).
Step 5: Tap **Confirm & Block Funds**.

Result: Your Bank's *Available Balance* is reduced by the application amount, while your *Blocked Money* increases by the exact same amount. Your Total Net Worth remains 100% accurate!

C. Handling Allotment Results:

Once allotment results are announced, open the **My Applications** sub-tab and update the status:

Result Status	What Happens Behind the Scenes	Next Steps
ALLOTTED	• Blocked funds are settled. • The allotted shares are automatically added to your **Stock Holdings Portfolio**. • Invested Money increases, Blocked Money drops to ₹0.	Track holding in the More > Holdings tab until you sell on listing day.
NOT ALLOTTED (REFUND)	• ASBA / UPI mandate is unblocked. • Blocked amount is instantly released back to your bank account's **Available Money**.	Funds are now immediately free for your next IPO application.
CANCELLED / WITHDRAWN	• Reverses the block and returns the amount to your available bank balance.	Application is archived.

6. Stock Holdings Portfolio

Under **More > Holdings Portfolio**, you can track all your stock holdings:

- **Automatic Allotments**: When an IPO is marked "Allotted", it automatically appears here.
- **Manual Stock Addition**: Tap **Add Stock** to record any external stock holding (Symbol, Quantity, Buy Price, Current LTP).
- **Real-time P&L**: View your total investment value, current value, and profit/loss percentage.

7. Security & PIN Lock

🔒 **4-Digit Security PIN**

Enable a 4-digit PIN in **More > Security & Privacy**. Protects your confidential balances from prying eyes whenever the app is launched.

⏱️ **Auto-Lock Timers**

Choose when the app locks itself automatically: *Immediately on backgrounding*, *After 1 minute*, *After 5 minutes*, or *Never*.

8. 100% Offline Backup & Data Portability

Exporting & Restoring Your Ledger:

Export Backup (.JSON): Tap *More > Backup & Restore > Save / Share File*. This exports a full encrypted snapshot of your accounts, transactions, allocations, and stock holdings. You can save it to Google Drive, WhatsApp, or local storage.

Restore Backup: On a new phone or after app reinstall, go to *Backup & Restore > Upload .JSON File* (or paste the JSON text directly). All your data is restored in milliseconds!

9. Display Themes (Light & Dark Mode)

Switch between high-contrast **Light Theme** and battery-saving **Dark Theme** anytime from *More > Appearance & Theme*. The UI switches instantly with smooth native physics.

10. Frequently Asked Questions (FAQ)

Q1: Does this app connect to my bank account or require net banking passwords?

No. The app is completely offline and manual. It never asks for bank credentials, OTPs, or PAN numbers.

Q2: Can I track multiple family member accounts?

Yes! You can create separate accounts like *"SBI (Dad)"*, *"HDFC (Self)"*, *"Zerodha (Mom)"* and track applications across multiple PANs simultaneously.
